INDEX TO VOLUME XXXVI.

A.

Account, additional of shooting stars of of Dec., 1838. 355.
Acknowledgments of new works, 399.
Adams, C B., on shells found on shore of Mass , 387.
shells of fresh pond, 393.
Adirondack works of N. Y , iron of, experimented on, 94.
Agates, cause of red color of, 207.
Agassiz's opinions relative to bowlders quoted, 331.
Aikin, Wm , statement of circular whirlwinds, 51.
America, N , thermal waters of, 88.
Amphibia, American, Dr Sager on, 320.
Analysis of acidulous or carbonated springs, 8.
by Dr Hayes, of cobalt ore from N. H, 334
of two cobalt ores, 332–3, questioned, 332.
of iron ores in Mass., 378.
of native iron from South Africa, 213.
of meteoric iron, 81.
of nitrogen springs, 7.
of iron ore in Maine, 151.
of marl from Farmington, Ct., 176.
of Salt springs at Onondaga and elsewhere in N Y., 3, 5, 6.
of sulphuretted springs, 9.
of Warwickite. 85.
of soils, rules for, 368.
Angling, practical essay on, 337.
Anthony, J. G. discription of a fossil, 106.
Argulus, new species of, announced, 393
Ashville, N C., meteoric iron from, 81.
Astronomy, elementary treatise on, 197.
Olmsted's introduction to, 203.
Australia, a weapon used by natives of, described, 164.

B.

Baer, Prof., on depth of frozen ground in Siberia, 210
Bakewell's Geology, third Am. Ed., 201
Baryta and Strontia, distinguished by Chromate Potassa, 183.
Barytes, sulphate of in N. Y., 113.
Batteries, galvanic, the benefit of fresh immersion of, 137.
Beck, Dr. L. C., notices of native copper, ores of copper, &c., in N. J , 107.
note on N Brunswick Tornado or Water spout of 1835, 115.
on mineralogical and chemical survey of State of N Y , 1
Berthier, M , mode of ascertaining the absorbent qualities of soils by him, 375
Berzelius on cause of rise of Sweden, 277
Bessel, Prof. F. W., discovery of parallax of star 61 Cygni by, 200.
Bischof, Dr. G., natural history of volcanos and earthquakes, 230.
Bituminization of wood in the human era. 118.
Blocks, erratic, 20.
recent explanations of, 325.
Boiling springs, notice of, 253, 4, 5, 6.
Boomerang, notice of, 164.
Boston Soc. of Nat. History, paper read before, 337.
minutes of their proceedings, 379.
Bowditch, Dr. notice of, 214.
Bowlders and diluvial scratches, 39, 44.
Prof. Struder on, 325.
Brewer. T. M., on the cow blackbird and goldfinch, 386–91.
Bricks, quantity made in N Y , 21.
Brine springs in N. Y., 2.
British naturalists, some notice of, 217.
British Association, 7th report of, acknowledged, 399.
Annual received for 1839, R. D. Thomson's, 400.
Brunswick, N., tornado of 1835, 115.
Buckland, Prof., Calymene named after, 106.
Building stones, 45.

C.

Cabinet of minerals for sale, 393.
Calcareous tufa, 44.

Calymene Bucklandii described, 106.
Carpenter, Prof. Wm., account of bituminization of wood in human era, 118.
Carburetted Hydrogen gas disengaged in N. Y., 6.
Catalogue of insects of genus sphinx in N. America, 282
Carbon and ox. copper compound of, 110.
Cavity containing water, 46.
Cement hydraulic, 37, 44
Champlain, Lake, tertiary formation of, 27.
Charpentier, Hr. V., completion of Hr. Venetz, theory of phenomena of bowlders, 327.
Chemical examination of native iron, 213.
action not the cause of volcanos, 231.
Chemistry of organic bodies, 202.
Cherty limerock or corniferous limerock proposed as the line of reference to State geologists, by A. Eaton, 61.
China Sea tyfoon in 1835, facts relating it by W. C. R., 59.
Chirotherium, footsteps of in sandstone, 397.
Chili, great elevation of land in, 274.
Church, John B., account of extraordinary echo, 175.
Circular fires occasioning whirlwinds, 50.
Citations from Geol. Reports on State of N. Y, for 1837–8, 1.
Civil Engineers, institution of, received, 400.
Clay stones, 48.
Clear sky, rain from, 178.
Coal, occurrence of in Mass, 377.
Cobalt ores, two new, analyzed, 332
Coffin, James H. meteorological paper edited by him, 165.
Columnar whirlwinds caused by fires, 50.
Conrad, T. A., report on the paleontological department of the survey of N. Y., 12.
Copper in combination with carbon, 110
Bisilicate of, 111.
Carbonates of, 111.
Gray sulphuret of, 112.
notice and ores of in N. J, 107.
Pyrites, 112.
red oxide of, 109.
Copperas, quantity of, manufactured in Mass., 378.
Correction, 394.
Corniferous lime-rock of N Y., as a line of reference, 61.
Couthouy, J. P. on two species of Cidaris and Patelloidea, 381.
monography of the Osteodesmacea, 382–9
County of Essex, report on, 26
Counties of Montgomery, Herkimer Oneida and Oswego, Geol. report on, 30.
Counties of Queens, Kings and Richmond, 16.
Cowles, Dr., statement of circular fires occasioning wind, 54.
Currents, marine, proofs of in N. Y., 37.

D.

Dana, Dr., analysis of Congress Springs, 8.
S. L., new method of analysis of soils, 366.
Danaite, proposed as a new mineral species, 334. (*Note.*)
Daubeny, Dr. C., his analysis of Lebanon springs quoted, 8.
on thermal waters in N. America, 88.
quantity of salt in sea water, 188.
Davy's hypothesis of volcanic action examined, 234, 5 et. seq.
De Kay, J. E. communication on zoology of N Y., quoted, 1.
Deposites from hot springs indicate their temperature, 259.
Descriptive catalogue of N. American insects of the genus Sphinx, 282.
Description of a fossil by J. G. Anthony, 106.
De La Beche, red sandstone, of, 68.
Directions for tracing rocks, 67.
Distillation destructive of oil of wine, 76.
District, geological, of N. Y., report on, 1st, 15.
E. Emmons' report on the 2d, 23.
geological, Vanuxem on the 3d, 30.
James Hall, on the 4th, 34.
Dog, tongueless, retaining power to bark, 194.
Drought, effects of, 80.
Durango, Mexico, mummies at, 200.
Dwight, Theo., statement of, concerning circular fires and wind occasioned by, 52.
Dykes in Essex Co., N. Y., 26.
how formed, 264.

E.

Earthquakes, natural history of, 230.
Eaton, A proposes cherty limerock, 61.
postcript to his article on page 71, 198.
Echo, musical, in Virginia, 174
many times repeating, 175.
Economical geology of Mass., report on examined, 363.
Editors to subscribers and readers, 216.
Effects of drought, 80.
Electro magnetism, by Dr. Page, 350.
Electricity, observations on, by Dr. Page, 353.
Electro-magnetic rotations, 129.
Elevation of land in human era, instances of, 271.

Emerson, G. B., on a new paper from beach grass, 386.
Emmons, E., report on the 2d Geol. district, 23.
Encroachments of the sea in N. Y., 16.
Erman, M. Jr., letter to M. Arago, 205.
Erratic blocks, 20.
Prof. Struder on, 328, et. seq.
Essex county, Geol. report on, of by E. Emmons, 23.
Etherine, destructive distillation of, 76.
Europe, (Continental) price of labor in, 176.
European observations on the meteoric shower of Nov , 1838, 179.
Experiments on the iron of Essex county, N. Y., 94.
Exploring expedition, U. S., progress of, 195.

F.

Failure of water in steam boilers detected by galvanoscope, 141.
Falls of Niagara, and river, 49.
Fibrous carbonate of lime, 113.
Fires, circular, occasioning columnar whirlwinds, 50.
Fish skins, mode of preparing, 196.
"Fishes of Massachusetts," reviewed by Dr. Storer, 337.
Floras, local commencement of, 225.
Floyd, Mr. J., account of whirlwind in India, April, 1838, 71.
Footsteps of Chirotherium in sandstone, 394.
Fossil fish in red sandstone, 186.
Foster, J. W., head of Mastodon giganteum, 191.
Fox, Chas., notice of Kilee or Boomerang, 164.
notice of new mode of preparing fish skins, 196.
notice of British naturalists, 217
Fresh immersion of galvanic batteries, 137.
Frodsham, W. I., elected a member of the Royal Society, 195.
Frozen ground in Siberia, depth of, 210.
Frozen wells, 184.
Fucoides and ripple marks, 46.

G.

Galvanic batteries, fresh immersion of, 137.
magnets, mode of preparing, 335.
mode of construction, 124.
Galvanoscope, use of, to detect failure of water in steam boilers, 141.
Gay-Lussac's opinion on volcanic action examined, 226.
Gas inflammable, disengaged at many places in N. Y., 6.
Gasconade county, Mo., mammoth in, 199.
Geine, constitution of, 369.
quantity of, in soils of Mass., 371.
sources of supply, 376.
Geodiferous limestone of Prof. Eaton, 38.
Geological reports on State of N. Y., citations from, 1.
Geologists of N. Y. and Penn., referred to the cherty limerock, by A. Eaton, 61.
Geology of Maine and Mass., reports on, 143.
Bakewell's, 3d Am. edition of, 201.
Geology of Mass., (economical,) by Prof. Hitchcock, examined, 363.
Geological reports, several acknowledged, 400.
Geothermometer of Dr. Mangus, 203.
Genera of Sphinges, 384.
Geyser great. account of, 255.
Globules in the blood analogous to Protococcus kermesinus 2 6.
Gould, A. A., minutes of the procedings of the Boston Society of Nat. Hist., 379.
on spongia, called Neptune's goblet, 386.
Granite occurring in N. Y., 23.
Graywacke of Hudson river, 69.
Great fires occasioning whirlwinds, 55.
Greece, revival of letters in, 192.
Greenwood, Rev. F. W. P., and Dr. Gould, on a species of Thracia, and on fruits from Burmah, 380.
Gypsum in marles and slates, 38.
pure, prejudice against, 43.

H.

Hall, James, at the 4th geological district of N. Y., 6.
Hardening of iron, 42.
Hare, Clarke, on destructive distillation of oil of wine, 76.
Harris, T. W., catalogue of N. American insects of the genus sphinx in his cabinet, 282.
on genus Cychrus, 391.
new species of Argulus, 393.
T. W., remarks on the inaccuracies of botanical books, 390.
Hayes, Dr., proposes iodate of soda, as a new chemical species, 391.
his analysis of a cobalt ore, 334.
Head of Mastodon giganteum, 189.
Height of water in Lake Ontario, 43.
Herschel, Sir J., letter to, on parallax of the star 61 Cygni, 200.
chemical examination of native iron, 213.
Hermann's view of the constitution of geine, 369.
Herrick, E. C., meteoric shower of April 20th, 1803, 358.
shooting stars of Dec. 1838, 355.

Herrick, E. C., shooting stars of April 20, 1839, 361.
rain from a clear sky, 178.
Hildreth, Dr. S. P., meteorological journal kept by him, 78.
Hitchcock, Prof. E., analysis of marl from Farmington, Conn., 176.
report on re-examination of economical geol of Mass. noticed, 363.
Hot springs replace volcanos, 253.
Humboldt, Baron Von, his opinion on extent of volcanic action, 231.
Hurricane of 8th April, 1838, in India, account of, 71.
Hydraulic cement, 37, 44.
Hydrogen gas carburetted, disengaged at Oneida, and elsewhere in N. Y., 6.
Hydrostatic pressure when equal to elastic force of steam, 243.
Hypothesis of chemical action in volcanos untenable, 231.
of increasing heat explains volcanic action, 239.

I.

Ice at bottom of a river, 186.
in a well, 184.
Immersion of galvanic batteries, 187.
Impressions of animal footsteps on sandstone, 394.
Indelible ink, new, composition of, 209.
Inflammable gas disengaged in N. Y., 6, passim.
Internal fire, proof of, 261, et passim.
Iron ores in N. Y., 21.
hardening of, 42.
experiments on that from Adirondack works, Essex, N. Y., 94.
its tenacity, 99, 102.
native, chemical examination of, 213.
ores in Mass., 378.
Islands, formation of from lava, 267-8-9, and 270.

J.

Jackson, Dr. C. T., his geological reports reviewed, 143.
on limestone from Welland canal, 379.
Jay, J. C., catalogue of shells, 3d edition, 399.
Johnson, W. R., experiments on two varieties of Essex iron, 94.
Jones, Rev. G., tabular view of price of labor in Europe, 177.
Journal, Meteorological, 78, 165.
Judson, D., on use of nitric acid in pulmonary diseases, 191.

K.

Kilee or Boomerang, notice of, 164.
Krug Von Nidda's classification of hot springs, 255.

L.

Labor, price of, on continent of Europe, 176.
Lake ridge of N. Y., 40.
Larned, Rev. W. A., translations relative to bowlders and cobalt ores, 325.
Lava, diagrams to show the ejection of, 249.
not uniform in ejections, 252.
breaking through sea and forming islands, 267.
Lead, Prof. Emmons on occurrence of, in N. Y., 42.
Leather, mountain, 114.
Lebanon springs analysed, 7.
Lepidopterous insects, catalogue of sphinges. 282.
Limestone, Prof. Emmons on, in N.Y., 47
Lime, fibrous carbonate, 113.
Line of reference for state geologists, 61.
Lives lost by a whirlwind in India, number estimated, 75.
Loomis, Prof. E., a meteorological table and register, 165.
description of his instruments, 172.
Lyceum of Nat. Hist. N. Y., list of officers in, for 1839, 195.

M.

Macomber, D. O., account of a frozen well, 184.
Magnetic needle, variation of, 28.
Magnets, galvanic, modes of constructing, 124.
Magnetic (electro) rotations, 129.
Magnets, mode of preparing permanent artificial ones, 336.
Magnetism. electro, by Dr. Page, 350.
Magnus, Dr., experiments on temperature of the earth, 203.
Maine and Mass., geological reports on, reviewed, 143.
Malcom, Rev Mr., on fossil bones from Burmah, 387.
Mammoth, (Mastodon? Eds.) 198.
Manual of Chemistry, Webster's, new edition of, 195.
Marine currents, proofs of, 37.
Marietta, Ohio, Met. Jour kept at, 78.
Marl, where occurring in Mass., 375.
Mastodon giganteum, head of, 189.
Marcy, Gov. Wm. L., geological reports communicated by him, noticed, 1.
Mather, W. W., report on the first district of N. Y., geological survey, 15.
McCord, J. S., Met. Register kept at Montreal by him, 180.
Mead, Dr., his analysis of Lebanon spring quoted, 7.
Meteoric iron from Ashville, N. C., 81.
shower of Nov. 1838, noticed in Europe, 179.
of Dec. 7, 1838, 355.

Meteoric shower of April 20, 1803, 358.
Meteorite, African, 393.
Meteorological Journal, abstract of, 78.
Register kept at Montreal, 1838, 180.
table and register, by Prof. E. Loomis, 165.
Register and Sci. Journal, edited by James H. Coffin, 165.
Mineral cabinet offered for sale, 393.
Mineral, new, Volborthite, 187.
Miscellanies, domestic and foreign, 174, 379.
Montreal, Met. Register kept at in 1838, 180.
Mountains of Essex county, 23.
how raised, 264.
Mountain leather, 114.
Mummies at Durango, Mexico, 200.
Murchison's Silurian System received, 389.
Museums, mode of preparing fish skins for, 196.
Musical echo in Va., 174.

N.

Naturalists, British, notice of, 217.
Native copper, and ores of, in New Jersey, 107.
Nat. Hist. of fishes of Mass., reviewed, 337.
Navigation, steam, 133.
New York geological reports, 1.
New works received, 399.
Nitric acid in pulmonary diseases, 191.
Nitrogen springs in N. Y. analysed, 7.
Norton, Prof. A., treatise on astronomy, 197.
Note on New Brunswick tornado, 113.
Notice, obituary, of Hon. Stephen Van Rensselaer, 156.

O.

Obituary notice of the Hon. Stephen Van Rensselaer, 156.
Observations on electricity, 353.
Ocean, phosphorescence of, 208.
Officers of Lyceum of Nat. Hist. N. Y., 195.
Oil of wine, destructive distillation of, 76.
Olmsted's introduction to astronomy, 203.
Onondaga, salt springs of, analysed, 6.
Ontario, Lake, its ridge, 40.
small lakes running into, 42.
shore of, and height of water in, 43
Ores of copper in N. Jersey, 107.
iron in N. Y, 21
Organic bodies, chemistry of, 202.
Ornithology of U. S., by J. K. Townsend, 201.
Outlet of small lakes into Ontario, 42.

P.

Page, C. G., on galvanic batteries, 137.
use of galvanoscope to detect failure of water in steam boilers, 141.
Page, Charles G., on electro-magnetism, 350.
observations on electricity, 353.
on musical echo in Va, 174.
Paleontological department of survey on N. Y, by T. A. Conrad, 12.
Parallax of the star 61 Cygni, 200.
Patton, J. H., account of hurricane in India, communicated by him, 71.
Peat occurring in N. Y., 16.
Petrified wood in N. Y. and Va.,(note) 12.
Petrifying springs in N. Y., 11.
Perdicaris, G., letter on the revival of letters in Greece, 192.
Postscript to p. 71, 198.
Potassa, chromate of, an agent to distinguish between baryta and strontia, 183.
Prejudice against pure gypsum, 43.
Price of labor and subsistence in certain parts of Europe, 176.
Proceedings of the Boston Society of Nat Hist., 379.
Progress of U. S. exploring expedition, 195.
Protococcus kermesinus, analogous to red globules in blood, 206.

Q.

Quantity of salt in sea water, 188.

R.

Radiation, solar and terrestrial, 182.
Rain from a clear sky, 178.
Raleigh's Tyfoon of Aug. 5th and 6th, 1835, 59.
Ray, John, biography of, 223.
Reclamation of M. A. Warder, 187.
Red color in agates, 207.
Red globules in blood, 206.
Redfield, W. C., account of columnar whirlwinds occasioned by fires, 50.
additional facts de Raleigh's tyfoon in China sea, 59.
Red oxide, copper in, N. Jersey, 109.
Red sandstone of De la Beche, 68.
Reference line for state geologists, 61.
Remarks on cases of wind caused by fires 56.
Remarks by the editors to subscribers and readers, 49, 165, 185 and 6, 216.
Remarks on the Nat. Hist. of the fishes of Mass., 337.
Rents caused by volcanos, 251.
Reports on the geology of Maine and Mass, 143.
Revival of letters in Greece, 192.
Ridge of Lake Ontario, 40.
Ridge roads, 40.
Ripple marks, 46.

River Niagara, 49.
Rotations, electro-magnetic, 129.
Royal Society of London, honor to an eminent scientific artist, 195.
Rules of analysis of soils, 368.

S.

Sager, Abrm. on American amphibia, 320.
Salt, quantity of in sea water, 188.
Salt, quantity of, in 1000 parts, 5.
Salines in N. Y., 2.
analysis of several, 3, 5, 6.
Sandstone of Potsdam, N. Y., 25.
red, fossil fishes in, 186.
Sands, white and siliceous, 21.
Saratoga and Ballston, 8.
Schimpfer, M., theory of bowlders quoted and questioned 331, 2.
Scientific proceedings of Boston Natural History Society, 379.
Scratches, diluvial, 39.
Sheffey, H. W., account of ice at the bottom of a river, 186.
Shepard, C. U., on meteoric iron from Buncombe Co., N. C., 81.
notice of a report of, on the economical geology of Mass., 363.
analysis of Warwickite, 85.
note to Wöhler's analysis of cobalt ores, 332, 33
Shooting stars of Dec. 1838, additional account of, 335.
Shower, meteoric, of April 20th, 1803, 358.
April 5, 1095 and 1122, 361.
Siberia, depth of frozen ground in, 210.
Silurian System by Murchison, acknowledged, 399.
Smith, Junius, on steam ships and navigation, 133.
Smith, James L., on chrom. potassa as a test, 183.
on preparing permanent magnets by galvanism, 335.
Smith, J. V. C., remarks on his "fishes of Massachusetts," 337.
Soils, analysis of, new mode detailed, 366.
classified, 363.
for analysis, how taken, 364.
in Kings, Queens, and Richmond, 21.
of Mass., table of geine contained in, 371.
power of absorbing moisture, 374.
of the West analyzed, 373.
Solar and terrestrial radiation observed at Montreal, 182.
Sphinges, catalogue of the N. American, 282.
Springs, acidulated or carbonated, at Ballston and Saratoga, 8.
Springs, brine, in N. Y., 2.
hot, in Iceland, 253, et seq.
Springs of nitrogen in N. Y., 7.
petrifying, in N. Y., 11.
thermal, of North America, noticed, 88.
Stars, shooting, account of, 179, 355, 358, 361.
State chemist proposed for Mass., 376.
Statement of lives lost by a whirlwind in India, in April, 1838, 75.
Steam, the agent in volcanic action, 241.
boilers, the failure of water in, detected, 141.
maximum, elasticity of, 242.
ships and navigation, 133.
Steel, Dr, analysis of Congress spring, 8.
Strokr, account of, 256.
Struder, Prof. B, on erratic blocks, translations from, 326
Storer, D. H., remarks on "natural history of fishes of Massachusetts," 337.
Subordinate rocks of N. Y., 68.
Subsistence in continental Europe, price of, 176.
Subterranean temperatures, 204.
Survey of N. Y, geological, 1, et seq.
paleontological, 12
Sussex, duke of, notice of Dr Bowditch, 214.
Synopsis of the families and genera of Lepidoptera, 284.

T.

Table of salt in 1000 parts of Onondaga and foreign salt, 5,
Tabular view of the price of labor in certain parts of continental Europe, 176.
Temperature of the earth, 203.
of the ground in Siberia, 205.
increasing, the cause of volcanic action, 239.
Temperatures, subterranean, 204.
Temperature of wells in N. Y., 25.
Tenacity of Essex iron, 99, 102.
Tertiary formation of L. Champlain, 27.
Teschemacher, J. E., on palatal tooth of Ptychodus polygyrus, 380.
Thermal springs, Von Nidda's classfication of, 255.
Thermal waters of N. America, noticed by Prof. C. Daubeny, 88.
Thomson, T., chemistry of organic bodies, 202.
Tongueless dog retaining power to bark, 194.
Tornado of N. Brunswick in 1835, 115.
Townsend, J. K., ornithology of U. S. by, 201.
Translations from Prof. Struder's account of erratic blocks, 325.
Tuckerman, E. Jr., on Geaster quadrifidus, 380.
Turpin, M., memoir by, on red globules in blood, 206.
Tyfoon of Aug. 1835, in China seas, facts concerning, 59.

V.

Van Rensselaer, Hon. S., obituary notice of, 156.
Vanuxem, L., on 3d geological district of N. Y., 30.
Variation of magnetic needle, 28.
Venetz, Hr., theory and phenomenon of bowlders, 327.
Volborthite, a new mineral, 187.
Volcanic action, how explained by Davy, 132, 3, 4, 5, and 6.
by Bichof, 239.
depth of, 243.
by Gay Lussac, 236.
Volcanos and earthquakes, natural history of, 230.
Von Buch, L., on nature of volcanic phenomena, 268.
Von Buch, L., opinion on formation of certain conglomerates, 266
observations on volcanic eruption in island of Lancerote, 260, 264.
observations on Palma and Gran Canaria, 273.
on formation of volcanic cones, 273.

W.

Walferdin, M., communication on subterranean temperatures, 204.
Warder, M. A., reclamation of, 187.
Warwickite analyzed, 85.
Water contained in a cavity, 46.
modes of access to volcanic fires, 262, et passim.
Water spout at New Brunswick in 1835, 115.
Water in steam boilers, failure of, detected, 141.
Webster's manual of chemistry, new edition, 195.
Wells, frozen, noticed, 184.
Whirlwinds, columnar, by W. C. Redfield, 50.
Whirlwind of 8th April, 1838, India, noticed, 71.
